

WE CAN HELP
READ OUT YOUR TEXT
AS YOU PLAY!

Want to experience your Agents of Discovery adventure in full sound?

Access the text-to-speech feature on your mobile device and have your Mission's text read out as you play!

What is Text-to-Speech?

Text-to-speech (TTS) is an accessibility feature that audibly reads out text during game play. When enabled, this feature is available for all Challenges at all Mission sites and automatically reads out text on your screen. Players can replay or stop the sound at any time using the button in the top right corner of their screens. Devices can be loaded with female, male, or gender neutral voices at the discretion of individual users.

How to Enable Text-to-Speech:

This feature requires access to your device's speakers or headphones and installment of a text-to-speech external library - which is standard on most devices.

To enable the feature:

- Tap the gadget wheel at the bottom center of the game's screen.
- Select **profile**.
- Swipe right to get to the **Agent Settings** page.
- Turn on **Text-to-Speech** and tap **Save**.

Limitations:

Text-to-speech appears on all game popups, messages, and Challenges except for the Color Picker Challenge, as it cannot be appropriately expressed.

Text-to-speech has a 2000 character limit. If a piece of text in a Mission is any longer than this, it will not be read.
